Cyber Security

We must be vigilant when using technology in our everyday lives. Here are some tips to help you stay safe.

1. Be wary of spyware laced emails. Don’t click on emails that you are not sure of or sound too good to be true. If the emails are requesting personal information delete it.

2. Phone scammers like to lure you in by saying you have won a prize, or even telling you that you are trouble with law enforcement. Usually they are wanting personal information or money.

3. Passwords are essential to protecting our personal information. Don’t give out your passwords, don’t use the same password for different accounts and make sure to pick a strong password.

4. Here are simple ways to make sure your card information stays safe. Shred anything with your card number on it. Check to make sure all your purchases are correct. Don’t let anyone use your card. If buying online make sure the site is reputable.
